Overview

High-Efficiency Air Conditioner Motor

This AC motor is specifically engineered for household air conditioning units, delivering reliable and consistent performance. Designed with a focus on operational excellence, it features low noise and low vibration characteristics to ensure a quiet environment. Its robust construction and stable rotational speed make it a dependable component for residential cooling systems.

Technical Specifications

Power Rating

18 W
Power

Electrical Requirements

Parameter	Value
Voltage	220V
Frequency	50Hz
Rotational Speed	1100 r/min
Insulation Class	Class E

Features

Key Advantages	Low Vibration, Low Noise, High Efficiency, High Reliability, Stable Rotate Speed
Customization	Installation dimensions and performance parameters can be customized according to specific customer requirements.
