

AC Motor Capacitor

This AC capacitor features reliable explosion-proof equipment for enhanced safety. It has good self-healing characteristics and a long lifespan, making it suitable for use in air conditioners, refrigerators, generators, and lighting.

Product Overview

Reliable Motor Starting and Running

The CBB65A capacitor is engineered with built-in explosion-proof equipment, ensuring high safety standards for demanding electrical environments. Featuring excellent self-healing characteristics and a long operational lifespan, it provides reliable performance for critical applications such as air conditioning, refrigeration, and power generation. This versatile component is designed to maintain stability under frequent use, making it an essential choice for professional HVAC and motor-run systems.

Technical Specifications

Capacitance

50 μ F

Standard Capacitance

5 %

Tolerance

Rated Voltage	450 VAC
Operating Frequency	50/60Hz
Climate Category	40/70/21
Standards	EN 60252-1

Applications

Common Applications

- Air-conditioners
- Refrigerators
- Generators
- Illuminating lamps
- Micro water pumps
- Cleaning machines
- Washing machines
- Single-phase water pump motors
