

AC Servo Drive for Automation

This AC servo drive is designed for industrial automation applications. It features precise motor control, multiple communication interfaces, and robust protection mechanisms.

Overview

High-Performance Servo Control

This AC servo drive is engineered for precision motion control in demanding industrial automation environments. It offers reliable performance for a wide range of servo motors and motion control systems. Designed with robust protection mechanisms, it ensures stable and accurate operation for complex machinery.

Technical Specifications

Suitable Applications

- Industrial Automation
- Motion Control Systems
- Servo Motor Drives

Model Number	EDS-0810A
Voltage Rating	200 V
Key Features	Precise Motor Control, Multi-Interface Communication, Robust Protection
