

Access Control and Intercom System with Keypad and Card Reader

This access control system integrates intercom functionality with multiple entry methods. It features a camera, speaker, keypad, digital display, and RFID card reader for secure building access.

Overview

Advanced Access Control Solution

This integrated access control and intercom system provides a secure and reliable entry management solution for buildings. Featuring a high-definition camera, integrated speaker, and a user-friendly digital interface, it ensures clear communication and visual verification of visitors. The device supports multi-factor authentication through both a physical keypad and an RFID card reader, making it suitable for high-security environments.
