

Access Platform Control Box

This control box is designed for access working platforms, providing centralized control and monitoring. It features multiple relays, terminal blocks, and an emergency stop button for safe and efficient operation.

Overview

Reliable Access Platform Control

This industrial-grade electrical control system is designed to provide centralized control and monitoring for suspended access equipment. Built with high-quality electrical components, it ensures reliable operation for hoist motors and platform balancing. The system prioritizes safety through integrated protection mechanisms, making it an essential component for demanding lifting environments.

Safety & Protection

Integrated Safety Features

Electric Leakage Protection, Relay Protection, Automatic Limit Switch, Alert Bell, Over-heat Protection, Emergency Stop

Construction & Durability

Enclosure Material

Electrophoresis steel plate with plastic-sprayed surface

Environmental Protection

Yes

Functionality

Operational Capabilities

- Powering individual hoist motors
- Adjustable platform balancing
- Centralized control and monitoring
- Emergency stop functionality
