

AC/DC Dual-Purpose Generator Welder

This AC/DC generator welder provides both alternating current for electricity and direct current for welding. Its dual-purpose functionality makes it suitable for construction sites, workshops, and remote locations where both power sources are required.

Product Overview

Dual-Purpose Power Solution

The SZF series is a versatile three-phase generator set engineered to deliver both AC electricity and DC welding capabilities simultaneously. This double-duty design provides essential power and welding flexibility, making it an ideal choice for construction sites, industrial workshops, and remote field locations. Its robust architecture ensures consistent, reliable performance in the most demanding operational environments.

Technical Specifications

Power Output Range

10 KW

Minimum Output

30 KW

Maximum Output

Core Functions

Three-phase AC Generation, DC Welding, Double-duty Operation

Features

Key Features

- Integrated control panel for streamlined operation
- Simultaneous AC power and DC welding output
- Heavy-duty construction for industrial durability
- High versatility for multi-purpose onsite applications
