

AD56-16 Series Indicator Light

The AD56-16 series indicator lights are designed for clear visual indication in various electrical systems. They feature high brightness, low power consumption, and easy installation for use in control panels and industrial equipment.

Overview

AD56-16 Series Indicator Light

The AD56-16 series indicator lights are engineered for a wide range of industrial applications, providing clear and reliable visual status indication for electrical systems. Designed with robust construction for long-term durability, these lights offer high brightness and low power consumption. They are an ideal, cost-effective solution for control panels, machinery, and various industrial equipment setups.

Technical Specifications

Mounting Diameter	16 mm
Rated Voltage	AC 380V
Model	AD56-16A

Certifications & Compliance

Certifications	CE
----------------	----

Key Features

Benefits

- High brightness output
- Low power consumption
- Easy installation process
- Robust construction for durability
