Product Overview

Professional Adjustable Beam Clamp

This high-strength adjustable beam clamp is engineered for secure and temporary attachment to steel beams, eliminating the need for drilling or welding. Designed for industrial, commercial, and construction environments, it provides reliable load-bearing support for suspending pipes, ducts, and other equipment. The robust steel construction, combined with a corrosion-resistant finish, ensures durability and safety in demanding rigging and lifting operations.

Technical Specifications

Load Capacity

1 TON

Safe Working Load (S.W.L.)

Material	High-strength steel
Finish	Black-coated / Corrosion-resistant
Flange Width Range	0-30 mm
Safety Features	CE Certified, Locking Mechanism, Load-Rated

Usage & Application

Typical Applications

- Overhead support systems
- Pipe suspension
- Ductwork installation
- Lifting and rigging
- Construction and maintenance

Installation Benefits

No Welding Required • No Drilling Required • Quick Installation • Adjustable Design
