

Adjustable Circular Positioning Tool

This circular tool features a ring-shaped design with an adjustable central hub. It is used for precise adjustments and control in specialized applications.

Product Overview

Precision Circular Positioning

This adjustable circular positioning tool is engineered for applications requiring precise alignment and control. Featuring a robust ring-shaped structure with a central hub, it allows for fine-tuned adjustments via a centralized metallic control mechanism. Its durable construction and intuitive design make it an essential component for specialized industrial positioning tasks.

Physical Characteristics

Design Type	Circular Ring Structure
Material Composition	High-grade Plastic, Metallic Components

Functionality

Key Features

- Central hub control
- Adjustable radial sections
- Ring-shaped geometry

Control Mechanism	Centralized metallic knob/button
Adjustability	Yes
