Product Overview

High-Efficiency Infrared Carbon Fiber Heater

The JL288 infrared carbon fiber heater offers a superior heating solution with 98% thermal efficiency, saving 30-40% more energy than traditional resistance wire heaters. Designed for both indoor and outdoor versatility, it provides rapid, health-conscious warmth by emitting beneficial 8-14 micron infrared rays. With a long service life of at least 5,000 hours and flexible installation options, this heater is an ideal choice for efficient, reliable climate control.

Technical Specifications

Model Number	JL288
Voltage Options	230V, 110V
Power Output	1000W - 3000W (230V) / 1000W - 1600W (110V)
Guaranteed Service Life	5000 hours
