

Adjustable Metal Positioning Clamp

This adjustable metal clamp is designed for positioning or securing objects. It features a U-shaped bracket and a tightening bolt.

Product Overview

Precision Positioning and Alignment

This adjustable metal positioning clamp is designed for industrial and mechanical applications requiring precise alignment or securing of components. Featuring a robust U-shaped bracket and a threaded rod mechanism, it provides reliable stability for complex setups. Its versatile design makes it an essential accessory for deflection control and object positioning in professional manufacturing environments.

Technical Specifications

Key Features

- U-shaped bracket design
- Threaded rod adjustment mechanism
- Black rectangular mounting block
- Heavy-duty tightening bolt

Clamp Type	Adjustable Positioning Clamp
Material	Metal, Industrial Grade

Applications

Primary Applications

Mechanical Alignment • Deflection Control • Industrial Securing • Component Positioning
