

Adjustable Optical Power Meter for System Calibration

This precision instrument is designed for measuring optical power levels. It is ideal for testing and calibrating optical systems, ensuring accurate and reliable performance.

Product Overview

Precision Optical Calibration

This adjustable optical power meter is a precision instrument engineered for measuring optical power levels with high accuracy. It is designed to support the testing and calibration of complex optical systems, ensuring reliable performance across various signal types and power levels. With its rugged housing and portable design, it serves as an essential tool for professionals working in telecommunications, fiber optics, and laser technology.

Manufacturing Origin

China-made

Key Features

Design Highlights

- Adjustable settings for diverse signal types
- High-precision power level measurement
- Rugged carrying case included
- Portable and durable construction

Primary Applications

Telecommunications, Fiber Optics, Laser Applications, System Calibration
