

Adjustable Pressure Switch for Water and HVAC Systems

This pressure switch is designed for automatic pump control in water systems and HVAC&R pump units. It features an adjustable pressure range and robust construction for reliable performance in demanding environments.

Product Overview

Professional Pump Control

This adjustable pressure switch is engineered for seamless automatic control of electric water pumps in both domestic and industrial settings. It effectively manages pump operation cycles while providing critical protection against dry-running damage. Designed for durability, the unit ensures reliable monitoring and maintenance of optimal system performance in HVAC and water delivery installations.

Technical Features

Key Capabilities

- Automatic start/stop pump control
- Dry-run protection
- Adjustable cut-in and cut-out pressure settings
- Integrated pressure monitoring gauge

Applications

Water Systems, HVAC Systems, Domestic Installations, Industrial Installations
