

Adjustable Tie Rod Assembly for Automotive Steering

This adjustable tie rod assembly is engineered for precise steering control and lasting durability. The assembly features a threaded rod for length adjustment, enabling accurate wheel alignment.

Product Overview

Precision Steering Performance

This adjustable tie rod assembly is engineered for superior steering control and long-term durability in demanding automotive environments. Featuring a high-strength steel construction with a corrosion-resistant coating, it ensures reliable performance and longevity. The inclusion of a threaded rod mechanism allows for precise wheel alignment fine-tuning, while integrated grease fittings facilitate smooth operation.

Technical Specifications

Material Composition	High-strength steel
Surface Coating	Protective corrosion-resistant coating
Maintenance	Grease fittings, Adjustable length, Corrosion resistant

Application

Primary Applications

- Automotive steering systems
- Precise wheel alignment
- Heavy-duty steering control
