

Advanced Control Module

This advanced control module is designed for various applications, including generator sets and industrial machinery. It features a user-friendly interface with a graphical display screen for monitoring parameters and alarms.

Product Overview

Advanced Control Module Overview

This advanced control module is designed for the integrated management of utility grids and generator sets. It features both manual and automatic operational modes, ensuring flexibility for diverse industrial applications. The interface is designed for simplicity and ease of use, providing clear visibility into critical parameters such as grid and bus status.

Operational Capabilities

Monitored Parameters

- Grid status
- Bus status

Operational Modes

Manual, Automatic

System Features

Design Philosophy

Intelligent • Humane Interface • Simple Operation

Management Function

Integrated management of utility grid and generator sets
