

Agricultural Disc Harrow

The agricultural disc harrow is a tillage implement used to cultivate soil. It consists of multiple individually mounted discs that cut through crop residue and break up clods, creating a finer soil texture suitable for planting.

Overview

Professional Tillage Solution

This agricultural disc harrow is a robust tillage implement designed for efficient soil cultivation and seedbed preparation. Featuring individually mounted discs arranged in gangs, it effectively cuts through crop residue and breaks up soil clods to create an optimal texture for planting. Built with a heavy-duty frame and adjustable components, this implement offers the versatility and durability required for diverse field conditions.

Technical Features

Implement Type	Disc Harrow
Design Configuration	Multi-gang disc arrangement
Adjustment Capabilities	Adjustable Disc Angle, Adjustable Hitch

Construction

Build Quality

Robust Frame • Heavy-Duty Discs
