

Agricultural Disc Harrow

This agricultural machinery features concave discs mounted on a frame. The discs break up soil, preparing it for planting.

Overview

Robust Soil Preparation Solution

This agricultural disc harrow is engineered for heavy-duty soil cultivation, utilizing a series of robust concave discs to effectively break up soil clods and prepare seedbeds. Designed for high efficiency, the gang arrangement allows for wide-swath coverage in a single pass, significantly reducing field preparation time. Its durable construction ensures reliable performance in demanding agricultural environments, making it an essential tool for modern farming operations.

Technical Specifications

Key Design Features

- Gang-mounted disc arrangement
- Robust frame construction
- Wide swath coverage
- High-impact soil penetration

Disc Configuration	Concave discs
Primary Application	Soil Tilling, Seedbed Preparation, Heavy-Duty Cultivation
