Product Overview

Professional Tillage Solution

This agricultural furrow plough is a robust implement engineered for primary tillage operations, specifically designed to handle loam and sandy loam soils. It features a heavy-duty steel frame with a double-bottom ploughshare configuration, ensuring durability and efficient soil turning. The design promotes optimal seedbed preparation through effective soil inversion, aeration, and residue burial, making it a versatile choice for various planting requirements.

Technical Specifications

Soil Suitability	Loam, Sandy Loam
Mounting System	Three-point hitch
Frame Material	High-strength steel
Configuration	Double-bottom

Performance Features

Performance Highlights

- Adjustable furrow depth control
- Independent plough body adjustment
- Corrosion-resistant coating
- Efficient soil pulverization and mulching
- Integrated depth control wheel
