

Agricultural Irrigation Water Pump

This water pump is designed for efficient drainage and irrigation in agricultural settings. Its durable construction features a flared inlet and curved outlet, with a manual control mechanism for flow regulation.

Product Overview

Professional Irrigation and Drainage Solution

This industrial-grade water pump is engineered for heavy-duty agricultural irrigation and field drainage applications. Its robust, modular construction ensures long-term durability and ease of maintenance in demanding environments. The unit features precise flow control mechanisms and specialized interior coatings designed to optimize hydraulic performance and resist corrosion.

Technical Specifications

Maintenance Level

Serviceable • Modular

Design Style

Modular bolted assembly

Design Features

Flared inlet, Curved outlet, Manual control handwheel, Corrosion-resistant interior coating
