Product Overview

Professional Agricultural Spraying Solution

This suspended rod-spray machine is designed for seamless integration with tractors, offering high efficiency for large-scale agricultural tasks. Built with anti-corrosive pipelines and a robust metal frame, it ensures long-term durability when handling pesticides, herbicides, or foliar nutrients. The system features a double-cylinder membranous pump for consistent pressure and adjustable spray heights for maximum operational flexibility.

Technical Specifications

Pump System	Double-cylinder membranous pump
Material Composition	Anti-corrosive piping, Durable plastic tank, Robust metal frame

Operational Features

Key Operational Benefits

- Flexible operation
- Adjustable spray-rod height
- Anti-drop spray-head system
- Stable working pressure
- Uniform liquid distribution

Suitable Applications	Pest control, Disease extermination, Foliar nutrient application, Weedicide application
