

Agricultural Machinery Air Cleaner

Air cleaner designed for agricultural machinery ensures clean air intake for optimal engine performance. It features a robust construction for durability and efficient filtration capabilities.

Product Overview

High-Performance Air Filtration

This air cleaner is specifically engineered for agricultural machinery and heavy-duty diesel engines. It ensures optimal engine performance by providing efficient air intake filtration, which is critical for extending engine life in dusty agricultural environments. Designed for durability, the unit features a robust construction capable of withstanding demanding operational conditions.

Technical Specifications

Model Identifier	S1110
Application	Agricultural Machinery, Diesel Engines

Maintenance

Maintenance Requirements

- Fill oil pool to the indicated oil level line before use.
- Clean and replace oil every 50 hours under normal air conditions.
- Use only clean, light-grade engine oil for cleaning.
