

# Agricultural Machinery Axle and Chassis Component

This high-precision axle and chassis component is designed for agricultural machinery. It features a splined shaft, mounting flange, and bearing surface.

## ADDITIONAL IMAGES

## Overview

### High-Precision Agricultural Component

This agricultural machinery axle and chassis component is engineered for demanding field applications. It features a robust design optimized for strength and durability, incorporating precision-machined surfaces and complex geometry to handle heavy loads. Designed for reliable power transmission and secure assembly, this component is a critical part of steering, axle, and chassis systems.

## Technical Specifications

### Primary Applications

- Steering Systems
- Axle Systems
- Wheel Assemblies
- Brake Components
- Chassis Structures

### Design Features

Splined Shaft • Machined Flange • Threaded Mounting Holes • Optimized Wall Thickness

### Material Composition

Aluminum alloy casting

### Manufacturing Process

Precision Casting, CNC Machining

## Customization

### Customization Support

Yes
