

Agricultural Machinery Silencer

These silencers are designed for reducing noise emissions from agricultural machinery. Constructed from durable metal, they come in various designs suitable for different applications.

Product Overview

Industrial Agricultural Silencers

These industrial-grade silencers are designed specifically for heavy-duty agricultural machinery and diesel engines. Built from robust, high-durability metals, they effectively minimize noise emissions to meet operational standards in challenging environments. The versatile design range includes cylindrical, perforated, and rectangular configurations to suit diverse engine setups and mounting requirements.

Technical Specifications

Configuration Options

- Cylindrical with curved exhaust outlet
- Perforated with mounting flange
- Rounded with threaded connection
- Rectangular with mounting bracket

Component Type	Diesel Engine Spare Part
Construction Material	Industrial Metal, Durable Alloy
