

Agricultural Tiller for Soil Cultivation

This agricultural tiller is designed for preparing soil for planting. It utilizes rotating blades to break up and aerate the soil, promoting healthy crop growth.

Product Overview

Professional Soil Cultivation Solution

This agricultural tiller is engineered for efficient soil preparation and cultivation in various farming environments. Featuring a robust design with high-performance tilling blades and a durable wheel system, it is built to handle demanding field conditions. Its specialized construction ensures optimal soil aeration and seedbed preparation, making it an essential tool for modern agricultural operations.

Technical Specifications

Primary Application

Soil Preparation • Cultivation • Agricultural Field Use

Design Features

- Heavy-duty blue and orange finish
- High-traction single tire
- Engineered for rural farming environments

Tilling Assembly

Blue tilling blades, Single tire configuration, Red hub wheel
