

Agricultural Tractor for Farming

This agricultural tractor is designed for farming operations. It is used for plowing, tilling, and hauling.

Overview

High-Performance Agricultural Tractor

This four-wheel agricultural tractor is specifically engineered for versatile farm operations, including plowing, tilling, and hauling. Built for reliability, it features robust mechanical components and large treaded tires that ensure maximum traction in various field conditions. Designed to power a wide range of farm implements, this tractor provides the essential performance required for professional agricultural productivity.

Technical Specifications

Model ID	TS-354
Drive System	Four-wheel drive

Key Features

Design & Ergonomics

- Durable front grille protection
- Integrated high-visibility headlights
- Ergonomic steering wheel and operator seat
- High-traction agricultural tires

Applications	Plowing, Tilling, Hauling, Implement Powering
