

Agricultural Water Pump

This water pump is engineered for agricultural drainage and irrigation applications. It delivers a high flow rate and pressure for effective water transfer in demanding environments.

Product Overview

Robust Agricultural Drainage Solution

The Water Pump BE102 is a high-performance, robust unit specifically engineered for agricultural irrigation and drainage tasks. Its durable construction ensures reliable operation even in demanding outdoor environments, making it a dependable choice for effective water management. Designed for efficiency, the pump features an optimized impeller and housing system that maximizes flow rate while minimizing maintenance requirements.

Technical Capabilities

Performance Features

1 High

Application Efficiency

Applications

Agricultural Irrigation, Field Drainage, Water Management

Design and Build

Construction Details

- Durable housing for long-lasting performance
- High-efficiency impeller design
- Minimal maintenance requirements
- Optimized for demanding agricultural environments
