

Agricultural Water Pump

This water pump is engineered for efficient water transfer and reliable operation. Constructed with durable materials, it is suitable for irrigation, drainage, and water supply.

Product Overview

High-Performance Agricultural Water Pump

The C106 is a professional-grade water pump engineered specifically for demanding agricultural environments. Designed for efficiency and reliability, it serves as an essential component for drainage, irrigation, and large-scale water supply systems. Its robust housing and precision-engineered impeller ensure consistent flow and pressure performance for effective water management.

Performance Metrics

Performance Key Indicators

106

Model Series

Construction & Durability

Design Features

- Robust, corrosion-resistant housing
- Precision-engineered impeller
- High-efficiency motor system
- Designed for heavy-duty agricultural operations

Application

Recommended Applications

Agricultural Irrigation, Water Drainage, Water Supply Systems
