

Agricultural Water Pump for Irrigation and Drainage

This water pump is designed for agricultural machinery, ideal for drainage and irrigation. It is a centrifugal pump featuring a pulley for belt-driven operation.

Product Overview

High-Efficiency Agricultural Water Pump

This centrifugal water pump is specifically engineered for demanding agricultural tasks, providing reliable performance for irrigation, drainage, and large-scale water transfer. Built with a durable housing to withstand rugged environments, it utilizes a belt-driven pulley system to ensure consistent and controllable flow rates. Its robust design makes it an essential component for maintaining optimal water management in farming operations.

Technical Specifications

Pump Category	Centrifugal
Drive System	Belt-driven (Pulley)
Housing Material	Cast Iron

Applications

Primary Applications	Irrigation, Drainage, Water Transfer
