

Agriculture Machinery Water Pump

This water pump is designed for use in agriculture machinery, specifically for drainage and irrigation applications. It features a robust construction with multiple ports for coolant inlet and outlet, ensuring efficient coolant circulation.

Product Overview

Professional Agricultural Water Pump

The AM106 is a robust water pump engineered specifically for demanding agricultural machinery applications, including drainage and irrigation. Constructed with high-durability metal housing, it is built to withstand harsh operating environments while maintaining long-term reliability. Its specialized impeller design ensures optimal coolant circulation, providing the flow rate and pressure necessary for effective engine cooling.

Technical Specifications

Key Features

- Robust housing construction
- Optimized impeller flow design
- Multi-port coolant circulation

Model Identifier	AM106
Housing Material	Durable metal (Aluminum/Cast Iron)
Primary Applications	Drainage, Irrigation, Agriculture Machinery
