

Air Bearing Casters

Air bearing casters are designed for moving heavy loads in situations where traditional equipment cannot be used. Standard capacities include 10T, 16T, 20T, 32T, 48T, and 60T.

Product Overview

High-Capacity Air Bearing Systems

These air bearing casters utilize a thin film of compressed air to move heavy loads, making them ideal for sensitive equipment and cleanroom environments. Designed for durability and trouble-free operation, these systems provide a low floor loading solution for maximum safety. The eco-friendly design operates without pollution, relying solely on compressed air as the raw material.

Technical Specifications

Available Load Capacities

- 10T
- 16T
- 20T
- 32T
- 48T
- 60T

Load Module Configuration

Four-module system, Six-module system
