

Air Bearing Casters for Aircraft Transport

Air bearing casters provide a durable solution for moving heavy aircraft components. Featuring multiple air modules, these casters ensure balanced and smooth transport of heavy loads, offering a long service life with careful use.

Product Overview

Air Bearing Casters for Heavy Load Transport

These air bearing casters are engineered for the safe and efficient transport of heavy machinery and large components, such as aircraft parts. By utilizing advanced air module technology, the system ensures balance and stability for heavy-duty objects during movement. Designed to simplify material handling, these tools provide a quick and reliable solution for industrial and manufacturing environments.

Technical Specifications

System Length	6 m
Main Air Tube Length	30 m

Warranty & Support

Warranty Period	1 year
Policy	Replacement or refund in case of quality problems.
