

Air Bearing Casters for Machinery Movement

Air casters are used for moving heavy machinery and equipment. These skates can be customized to meet specific requirements.

Overview

Air Bearing Casters for Precision Movement

These heavy-duty machinery moving skates utilize an air film technology to float loads, providing frictionless movement across various floor surfaces. Designed for safety and efficiency, they are an ideal solution for transporting sensitive or expensive equipment without causing floor damage. The system is easy to operate, requiring no specialized training, and is highly versatile for moving equipment of any shape.

Performance & Durability

Industry Experience

20 years

Years of Development

Diaphragm Material

Pure Urethane

Key Advantages

Superior wear resistance, Frictionless movement, Floor protection, Low profile

Configuration

System Configuration

- 4-skate kit
- 6-skate kit

Application

Suitable Environments

Cleanrooms • Sensitive Flooring • Industrial Facilities
