

Air Bearing Moving System for Heavy Loads

This air moving system is designed for the easy movement of heavy objects. It utilizes air bearings to create a near-frictionless interface, allowing for efficient movement with minimal effort.

Product Overview

Industrial Air Bearing Moving System

This advanced air bearing moving system is engineered to facilitate the transport of heavy loads with exceptional efficiency. By utilizing compressed air as the primary power source, the system creates a near-frictionless interface, significantly reducing the effort required for material handling. Designed for durability and long-term reliability, it offers a sustainable solution for industrial and manufacturing environments.

Performance & Durability

Environmental Impact

Zero Emission • Clean Operation

Expected Service Life

10 years

Operational Details

Power Source

Compressed Air

Training Required

No

Maintenance Requirement

Minimal

Surface Compatibility

Smooth, Non-porous

System Components

Included Components

- Air bearing modules
- Connection hoses
- Central control unit
