

Air Bearing Rigging System for Heavy Load Transport

This air caster rigging system is designed for transporting heavy loads with ease. When properly maintained, the system can provide over ten years of reliable performance.

Product Overview

Air Bearing Rigging System

This air bearing rigging system is designed for the safe, efficient, and simple transport of heavy loads, ranging from large appliances to industrial machinery. By utilizing air modules placed under heavy objects to maintain balance, the system creates a low-friction environment for smooth movement. Built for durability, this solution is engineered to provide long-term service with minimal maintenance requirements.

Technical Specifications

System Length	6 meters
Main Air Tube Length	30 meters
Expected Service Life	10 years

Service & Warranty

Warranty Period	1 year
Quality Guarantee	Refund Policy, Renewal Policy, Quality Assurance

Key Features

Operational Advantages

- Low-friction transport
- Maintains load balance
- Quick and simple setup
- Minimal maintenance required
