

# Air Bearing System

This air bearing system includes four air bearing modules and a control unit. It facilitates frictionless movement using compressed air.

## Product Overview

### Heavy Load Moving Solution

This air bearing system represents the latest design in heavy load moving equipment. Engineered to handle loads of any shape, it provides a versatile solution for industrial material handling requirements. The system is designed to facilitate efficient, precise, and safe movement of heavy objects within a facility.

## System Components

### Included Components

- Four air bearing modules
- Control unit with multiple pressure gauges
- Control knobs for precise operation
- Coiled yellow air hoses
- Red pneumatic hoses

### System Type

Heavy Load Moving • Pneumatic
