

# Air Bearing Transporter Kit

This kit enables the preparation of air transporters for use. It includes air bearing casters, air hoses, a control manifold, and support plates.

## Overview

### Air Bearing Transporter Kit

This professional-grade air bearing transporter kit is engineered for the seamless movement of heavy machinery and industrial equipment. The system utilizes a modular design, incorporating a main airway and precise pressure regulation to ensure stable, friction-free transport. By floating loads on a cushion of air, this equipment protects both the machinery being moved and the facility flooring from damage during relocation.

## System Components

### Included Components

- Air bearing casters
- Main airway system
- Control manifold
- Air hoses
- Barometer (pressure gauge)
- Support plates

### Safety Features

Pressure Regulation, Leak Prevention, Floor Protection

## Operational Metrics

### System Performance

**1 Integrated**

Pressure Monitoring
