

Air Brake Power Shift Component

This air brake power shift component is designed for integration into heavy-duty vehicle braking systems. It features ports and fittings for connection to other system parts, enabling pneumatic or hydraulic function.

Product Overview

Air Brake Power Shift Component

This air brake power shift component is engineered specifically for heavy-duty truck trailer applications. It features a robust cylindrical metal housing designed to withstand demanding pneumatic or hydraulic operating environments. With integrated mounting points and specialized ports, it provides reliable performance for power shifting or steering control systems.

Technical Details

Key Features

- Cylindrical metal housing
- Integrated black rubber bellow/boot
- Multiple mounting points
- Pneumatic/Hydraulic port fittings

Application

Truck Trailer Air Brake Systems

System Function

Air Brake System, Power Shift, Heavy-Duty
