

# Air Bubble Film Production Line

This air bubble film production line is designed for manufacturing multi-layered films with air bubble layers. The machine incorporates multiple extruders to produce films with layers such as aluminum layers, top layers, bubble layers, and flat layers.

## Overview

### High-Performance Air Bubble Film Production

This advanced extrusion line is engineered for the precise manufacturing of multi-layered air bubble films. It utilizes a sophisticated system of extruders to combine various materials, including aluminum, top, bubble, and flat layers, ensuring high-quality output for packaging and insulation needs. With integrated tension controls and advanced monitoring systems, this machine provides consistent layer alignment and reliable performance for demanding industrial applications.

## Technical Capabilities

### Compliance

CE Certified

### Supported Film Layers

Aluminum Layer, Top Layer, Bubble Layer, Flat Layer

## Applications

### Primary Applications

- Protective Packaging
- Thermal Insulation
- Industrial Wrapping

## System Features

### Key Control Features

- Multi-extruder configuration
- Precision tension control
- Advanced monitoring system
- Consistent winding mechanism
