

Air Caster Load Moving System

This air caster system is designed for moving heavy loads with ease and precision. The system allows for independent adjustment of air pressure to each module, ensuring balanced weight distribution and smooth movement.

Overview

Advanced Load Moving Technology

The Air Caster Load Moving System provides a modern, efficient alternative to traditional heavy lifting equipment. Designed for precision and ease, this system allows for the smooth, quiet movement of heavy machinery within industrial environments. Its low-noise operation makes it an ideal solution for workshops with strict noise level requirements.

Technical Features

System Components

- Four air bearing modules
- Central control unit
- Pressure gauges and valves
- Quick-connect hoses

Operational Benefits

Low Noise Operation, Precision Positioning, Balanced Weight Distribution, Easy Setup

Control Mechanism

Independent air pressure adjustment for each module
