

Air Caster Machine Moving System

Air caster moving systems provide nearly frictionless movement for moving heavy equipment safely. The air casters come in various shapes and sizes, are durable and lightweight, and built for years of trouble-free operation.

Product Overview

Advanced Load Moving Technology

The Air Caster Machine Moving System provides a nearly friction-free solution for transporting heavy machinery and equipment. By utilizing compressed air to create a thin, load-bearing air film, the system allows for precise, omnidirectional movement across smooth surfaces. This method significantly reduces floor loading and prevents surface damage, making it ideal for delicate or heavy industrial applications.

Operational Features

Safety Compliance

Hazardous Area Compatible • Spark-Free

Key Benefits

Friction-free movement, Low floor pressure, Spark-free operation, Lightweight construction, Precise maneuvering

Power Source

Compressed Air

System Components

Included Components

- Air casters
- Central control unit
- Air hoses

Industry Experience

20 years

Years of Professional Service
