

Air Casters for Equipment Moving

Air casters use a thin layer of air to lift and move heavy loads, reducing friction. They are ideal for moving sensitive equipment, offering precise movement and protecting floors.

Overview

Precision Load Movement System

These air casters utilize a thin film of compressed air to lift and move heavy loads with minimal friction and precise control. Designed for industrial and cleanroom environments, the system distributes weight evenly to protect floors and sensitive equipment during transport. With a durable construction built for long-term use, this solution offers omnidirectional maneuverability in tight spaces.

Technical Specifications

Power Source	Compressed Air
Expected Service Life	10+ years
Movement Capabilities	Omnidirectional, Frictionless, High Maneuverability

Features

Key Benefits

- Protects delicate floors
- Distributes weight evenly
- Suitable for cleanrooms
- Minimal friction movement
- Durable construction

System Components

Component	Function
Air Bearing Modules	Lifts and supports the load
Control Unit	Regulates airflow to modules
