

Air Compressor for Pneumatic Tools

This air compressor converts power into potential energy by forcing air into a storage tank, increasing the pressure. The compressed air is held in the tank until needed for applications such as pneumatic tools, spray painting, and inflating tires.

Product Overview

Professional Air Compression Solution

This 3HP air compressor is designed to convert electrical energy into pressurized air, stored efficiently within a 100L tank. It provides a reliable air delivery of 330 L/min at a working pressure of 8 bar, making it suitable for demanding pneumatic tool applications. Built for performance and durability, it is an essential asset for workshops requiring consistent compressed air supply.
