

Air Conditioning Check Valve

This check valve is designed for air conditioning systems. It prevents backflow and ensures efficient operation.

Product Overview

High-Performance Air Conditioning Components

These air conditioning units are engineered for reliability and efficient climate control. Designed to meet rigorous international standards, the system supports versatile installation requirements with robust cooling capacities and optimized airflow. Ideal for professional HVAC applications, these units feature durable construction and are certified for quality and environmental management.

Certifications & Standards

Certifications	ISO 9001, ISO 14001:2004, CE

Technical Specifications

Key Performance Metrics

10.4 kW Cooling Capacity	56 dB(A) Noise Level	230 V Operating Voltage
------------------------------------	--------------------------------	-----------------------------------

Dimensions Reference

Parameter	Value
Width	300-1150 mm
Height	716-970 mm

Unit Weight	65 Kg
Pipe Diameter	12.7 mm
Refrigerant	R22
