

Air-Cooled Diesel Engine 2.8-8.0kW

Air-cooled diesel engine designed for power generation. It features a compact design, robust construction, and efficient combustion for reliable performance.

Product Overview

High-Efficiency Air-Cooled Diesel Engine

This air-cooled diesel engine is engineered for reliable power generation across a variety of portable applications. Featuring a compact and robust construction, it ensures dependable performance even in demanding environments. The engine's efficient combustion system is designed to provide green power while maintaining high operational standards.

Performance Metrics

Power Output

2.8 kW

Minimum Power

8 kW

Maximum Power

Technical Specifications

Model Series

PD186

Cooling Method

Air-Cooled

Fuel Type

Diesel

Key Features

Design Features

- Compact design for portability
- Robust construction for durability
- Efficient combustion system
- Reliable performance for power generation

Applications

Intended Use

Power Generation, Portable Power Source, Industrial Machinery, Green Power Applications
