

Air-Cooled Engine with Carburetor

This high-performance engine features a compact design with a carburetor fuel system and air-cooled cylinder head. The engine is designed for applications requiring a reliable and powerful source of mechanical energy.

Product Overview

High-Performance Air-Cooled Engine

This robust air-cooled engine is engineered for reliable mechanical power generation in demanding applications. Featuring a compact design and an integrated carburetor fuel system, it ensures efficient operation and consistent performance. The engine block is constructed for durability, with prominent cooling fins designed for optimal heat dissipation during extended use.

Technical Specifications

Cooling System	Air-Cooled
Fuel Delivery	Carburetor
Design Highlights	Compact Design, Robust Construction, Efficient Heat Dissipation

Maintenance

Filtration Components

- Integrated Oil Filter
