

# Air-Cooled Gasoline Engine for Industrial Pumps

This air-cooled gasoline engine is designed for powering industrial pumps and other machinery. It features durable construction, efficient combustion, and reliable performance.

## Product Overview

### Industrial Power Solution

This air-cooled gasoline engine is specifically engineered for powering industrial pumps and heavy-duty machinery. Designed with efficiency and reliability in mind, it offers a compact footprint that allows for seamless integration into existing operational systems. Its robust construction ensures dependable performance, making it an ideal independent power source for water pumps, generators, and similar equipment.

## Technical Features

Cooling System	Air-Cooled
Fuel Type	Gasoline

## Operational Benefits

### Key Advantages

- Easy start mechanism
- Low fuel consumption
- Compact design
- Durable construction

## Applications

Suitable Applications	Industrial Pumps, Generators, Portable Machinery, Water Pumps
