

Air-Cooled Piston Compressor for Industrial Use

This air-cooled piston compressor is designed for industrial applications. It features a multi-cylinder compressor unit, efficient cooling system, and powerful electric motor for demanding tasks.

Product Overview

Industrial Air-Cooled Piston Compressor

This heavy-duty air-cooled piston compressor is engineered specifically for demanding industrial environments. It features robust construction, a multi-cylinder compressor unit, and a high-efficiency cooling system with a large radiator to ensure reliable performance. Designed for manufacturing, construction, and automotive applications, it provides consistent high air delivery for critical operational tasks.

Technical Specifications

Cooling System	Air-cooled
Lubrication	Pressure Lube
Configuration	Multi-cylinder

Applications

Suitable Industries	Manufacturing, Construction, Automotive
---------------------	---

Key Features

Performance Highlights

- Heavy-duty industrial design
- High-efficiency large radiator
- Powerful integrated electric motor
- Reliable high-volume air delivery
