

Air Cushion Conveyor System for Material Handling

This air cushion conveyor system ensures smooth and reliable conveying by utilizing a cushion of air, reducing downtime and increasing productivity. Its modular design allows for customization and integration into existing production lines.

Product Overview

Air Cushion Conveyor System

The QDG Series Air Cushion Conveyor System is engineered for efficient and gentle material handling across industrial applications. By utilizing a continuous cushion of air, the system significantly reduces friction, thereby minimizing the risk of product damage during transport. This modular design allows for seamless integration into existing production lines, ensuring high-volume reliability and increased operational productivity.

Key Advantages

Operational Benefits

- Minimal friction during transport
- Reduction in product damage
- High-volume handling capability
- Modular design for custom integration
- Increased production line uptime

Technical Features

Ideal Applications

Delicate Material Handling, High-Volume Transport, Modular Integration
