

Air Disc Brake Assembly for Commercial Vehicles

This air disc brake assembly is a critical component for heavy-duty vehicle braking systems. Its robust caliper design applies even pressure to the brake pads, providing reliable stopping power.

Product Overview

Heavy-Duty Air Disc Brake Assembly

This air disc brake assembly is a critical component engineered for the braking systems of heavy-duty commercial vehicles, including trucks and buses. It features a robust caliper design that ensures even pressure application to the brake pads for reliable and consistent stopping power. Built for demanding conditions, the assembly incorporates advanced heat dissipation capabilities to maintain performance and safety during extended operation.

Technical Specifications

Assembly Components

- Robust Caliper Design
- Rotor Interface
- Pneumatic Actuator
- Mounting Hardware

Suitable Vehicles

Trucks, Buses, Commercial Vehicles

Performance

Key Performance Indicators

1 Optimized

Heat Dissipation

1 High

Durability
