

Air Film Transporter System with Four or Six Skates

Air caster rigging systems are used for moving and handling heavy items. The air film transporters are available with either four or six air skates.

Product Overview

Air Film Transporter System

The Air Film Transporter System utilizes a continuous film of flowing air to eliminate friction, allowing for the easy movement and precise positioning of heavy loads. By placing these skates underneath a load and applying air, users can maneuver heavy equipment with minimal effort and reduced floor stress. This system is designed for industrial handling applications where reliability, safety, and cost-effectiveness are paramount.
